AvaSharks are a collection of 10,000 NFT's, born and bred on the Avalanche Blockchain.

AvaSharks first surfaced on December 3, 2021. Since then, we have been busy building a grass roots community and growing our network within the Avalanche space.

As we are the first waging platform to enter this space, our aim is to grow into a major player within the blockchain betting industry and to transform into a fully operational online gaming platform.

Our NFTs have been designed by Ark, a design company specializing in digital tech industries

Roadmap

1. Fully Rigged 3D art on AVAX ready to be deployed in future Metaverse games
2. Atlantis Gate – Coin Flip, PvP betting platform.
3. Lottery - injected with % of proceeds from Shark Vault. Lottery will be organized every quarter and will be accessible to all Shark holders and ticket holders. Ticket holders will be bringing in additional capital to the lottery prizes, therefore will represent an additional stream of revenue.
4. Shark Gen 2 Release - All future new generation drops will be free exclusively for Shark Holders.
5. Shark Race - An underwater P2E racing game with special breeding abilities to upgrade your shark's skill level.
6. Multichain – Implementation of different wallets, from different blockchains, further increases our turnover, and consequently increasing our revenue streams.
7. An iterative approach will be developed and added onto the road map, as we plan to grow the Atlantis Gate to eventually operate as fully operational online gaming platform.

Our mission is to transform Atlantis Gate into a "one stop shop" gaming platform that will put Avalanche on the map as a top destination within the blockchain betting industry.

The platforms humble beginnings will be a coin flip game where players gather to bet against one another.

As we expand both our team & our revenue streams, we will eventually be adding on all sorts of unique and fun betting games and platforms such as Shark racing, roulette and much more.

Shark Race

Conceptually, the Shark race will be like horse racing, but instead of horses we'll obviously utilize sharks, and the theme will be under water.

To spice things up, we will be releasing NFTs with nesting characteristics. This will be included in Gen 2 of the Sharks and to keep it as fair as possible only players with equal upgrades and characteristics will race against one another.

For those that are wondering, a Nesting NFT means that one NFT can own other NFTs attached to it. For example, a Gen 2 Shark holder can acquire an NFT that can upgrade the sharks' fins or gills. This will be used to enhance the speed and stamina of the Sharks in the race!

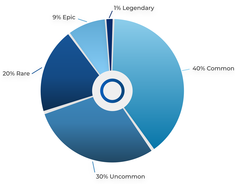
Rarity Level



Mint Sharing Scheme

The revenue from the Mint Launch will be split in the following ways:

1. 30% will go into the Shark Vault, of which 50% of that amount will be allocating to launch the waging platform and the rest will be split between our marketing expenses, giveaways and for growing & maintaining our staff.
2. An additional 5% will be allocated to Sea Conservation Charity.
3. The remaining amount will be distributed between the founders and the principal stakeholders (Project Managers, Game Developers etc).

Revenue Sharing Scheme

First 3 months of operations:

100% of project revenues will be equally distributed to all AvaShark holders on a weekly basis, meaning that AvaShark holders will benefit from passive income as long as they hold the NFT.

After 3 months the breakdown will be:

Shark Vault (Treasury)

Aquarium (Team Vault)

Royalties to Avasharks NFT Holders

Aftermarket sales:

2.5% royalty will go towards Shark holders, and 2.5% will go towards the Aquarium.

Every quarter a percentage of the bank vault will be distributed to shark holders and ticket holders in the form of a lottery. Lottery ticket holders will be an additional stream of revenue.
